Open Source Subject Database Project (Drupal)
http://cbmm.mit.edu/ossdp

Uncompress the "ossdp files.zip" file and move files to your servers web hosting folder. This contains the Drupal 10.1.7 files and all associated website files to get your site going.

Import the "mysql database.sql.zip" file into your SQL server. The current username is "admin" and password is "OSSDPpass10!". For security, these should be changed for your install and new information updated on the "/sites/default/settings.php" to allow your website to connect to your database.

The trusted_host_patterns setting is not configured in settings.php. This can lead to security vulnerabilities. It is **highly recommended** that you configure this. See Protecting against HTTP HOST Header attacks for more information.

In settings.php, it's recommended to change the Hash Salt to keep your one time password generation, token, etc. secure.

Follow Drupal guidelines and security recommendations to keep your website safe and secure such as enabling SSL/HTTPS. More information from Drupal - https://www.drupal.org/security/secure-configuration

Preset automations:

Rules: *Disable these or update the text and email addresses to suit your needs.*

- Auto sends emails to thank for signing up if gestational age is over 36 months (change in Condition Data: Comparison). Edit email content and address in Action: Send Email
- Auto sends emails to thank for signing up, but rejecting at this time, if gestational age is less than 37 months (change in Condition Data: Comparison). Edit email content and address in Action: Send Email
